

# freeaddrinfo()

Frees the result of `getaddrinfo()`.

```
#include <sys/socket.h>
#include <netdb.h>

struct addrinfo hints;
struct addrinfo *result;
struct addrinfo *rp;
int sock;

std::memset(&hints, 0, sizeof(hints));
hints.ai_family = AF_UNSPEC;    // IPv4 or IPv6
hints.ai_socktype = SOCK_STREAM; // TCP
hints.ai_flags = AI_PASSIVE;    // For bind (wildcard address)

// Get address info for port 8080
int ret = getaddrinfo(NULL, "8080", &hints, &result);

// ...

freeaddrinfo(result);
```
