

gai_strerror()

Address and name information error description.

Converts an error code to a string.

```
// Get address info for port 8080
int ret = getaddrinfo(NULL, "8080", &hints, &result);
if (ret != 0)
{
    std::cerr << "getaddrinfo error: " << gai_strerror(ret) <
< std::endl;
    return -1;
}
```
