

recv()

Receive a message from a Socket.

```
char buffer[4096];
int bytesReceived = recv(clientFd, buffer, sizeof(buffer) -
1, 0);

if (bytesReceived > 0)
{
    buffer[bytesReceived] = '\0';
    // Process data
}
else if (bytesReceived == 0)
{
    // Client disconnected gracefully
    close(clientFd);
}
else if (bytesReceived < 0)
{
    // Error (check errno)
    if (errno != EAGAIN && errno != EWOULDBLOCK)
    {
        // Real error
        close(clientFd);
    }
}
```
