

socket()

Creates a Socket.

```
#include <sys/socket.h>
#include <netinet/in.h>
#include <arpa/inet.h>

int listenFd = socket(AF_INET, SOCK_STREAM, 0);
```

- Domain: AF_INET (IPv4)
- Domain: AF_INET6 (IPv6)
- Type: SOCK_STREAM (TCP)
- Type: SOCK_DGRAM (UDP)
- Protocol: 0 (Auto-select. TCP for SOCK_STREAM)

Returns file descriptor (int) or -1 on error.

```
close(clientFd);    // Close client socket
close(listenFd);    // Close listening socket (on shutdown)
```
