

Socket Programming

[Web Server]		[Web Browser]
socket() ←-----		
bind() ←--- Assign address/port		
listen() ←-- Ready to accept		
accept() ←-- Client connects -----		
recv() ←--- "GET /index.html" -----		
send() ----- "HTTP/1.1 200 OK" ----->		
close() ←-- Disconnect -----		

A Socket is an endpoint for network communication.

Types of Sockets

- Listening Socket
 - Accepts new connections
 - Direction: Server only
- Client Socket
 - Communicate with one web browser
 - Direction: Client and Server

- Pipe Sockets
 - Communicate with CGI
 - Direction: Parent and Child
